H. Wakeham

Sometime ago we learned that Reynolds is making special cigarettes loaded with cadmium to 3 different levels of concentration for Professor Aviado at the University of Pennsylvania School of Medicine. We assumed that this request came through CTR and was in connection with his CTR project on "Influence of Cigarette Smoke on Pulmonary Emphysema and Brochospasm." I have asked Dr. Raymond Fagan to prepare a commentary on possible effects of cadmium in tobacco smoke. He has submitted the attached memorandum which I am sending to you along with a copy of the Aviado project summary. We should watch with interest the results of Dr. Aviado's experiments.
